

NOW YOU'RE READY

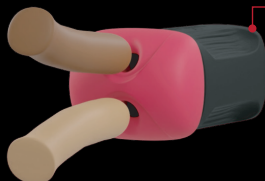

USAGE INSTRUCTIONS

Carefully read the **BEFORE FIRST USE** and **SAFETY** sections.

1. LUBE UP

First, generously lube up the holes and inside channels of CockBlock®, as well as both your cocks. The black casing is made of silicone and is only compatible with water-based lubricants.

2. GET INTO POSITION

Next, hold CockBlock between you and your partner in a face-to-face position lying or standing. Slowly penetrate the two holes on the curved side of CockBlock, one cock at a time.

3. START THRUSTING

Now, take turns thrusting on each other's cocks. Unlike some masturbatory toys, CockBlock is meant to remain mostly still during use - one partner should thrust while the other partner remains stationary, until you find your rhythm.

- A slight odour and some residual powder are normal results of the manufacturing process. The odour will dissipate over time. The powder can be rinsed off with warm water.
- For long term storage, separate CockBlock's two parts with a plastic bag or store separately.

BEFORE FIRST USE

- Remove the red inner-sleeve from the black casing by pushing the square end of the inner-sleeve into the casing while gently pulling from the round end (the inner-sleeve may tear if forced).
- Remove the protective plastic wrap (the plastic wrap is a choking hazard; keep away from children and pets).
- A slight odour is a normal result of the manufacturing process and will dissipate over time. Inspect the outside and inside walls to ensure they are soft to the touch.
- Clean both parts with warm (not hot) water and mild soap (see **CLEANING** section) and pat or air dry. You may notice some residual powder, which is a normal result of the manufacturing process.
- Carefully reinsert the red inner-sleeve by grasping the square end of the inner-sleeve through the casing and gently pull through while pushing down on the round end (the inner-sleeve may tear if forced).

SAFETY

- CockBlock is designed to be pleurably tight, but not uncomfortable. If you feel any discomfort, cease use immediately.
- Always use generous amounts of water-based lube in CockBlock and on your cocks.
- Use condoms to decrease the risk of contracting or spreading sexually transmitted infections.
- CockBlock is made from materials common to adult toys (silicone and TPE). Do not use if you are sensitive to either material.
- If you experience skin irritation, cease use immediately. Do not use in areas where skin is irritated, broken and/ or infected.
- Excessive usage may cause bruising or skin irritation.
- Do not use CockBlock in any way that forcefully bends your cock or creates unnatural positions that may result in injury.
- CockBlock is not intended for any commercial, therapeutic or medical purpose. It is intended for use as a non-medical novelty device only.
- For external use only.
- Do not place CockBlock into a fire or freezer.
- Only for use by adults, keep out of reach of children.
- Must not be used other than for its intended purpose. Supplier is not liable for improper use.

CLEANING

- Remove the red inner-sleeve from the black casing by pushing the square end of the inner-sleeve into the casing while gently pulling from the round end (the inner-sleeve may tear if forced).
- Clean both parts with warm (not hot) water and mild soap.
- For extra hygiene, only the silicone black casing can be sterilized in boiling water or placed in a dishwasher. The red inner-sleeve is made of a softer material called thermoplastic elastomer and **CANNOT BE BOILED OR PLACED IN A DISHWASHER** or it will deform.
- Pat or air dry (do not blow-dry or apply direct heat).
- When dry, carefully reinsert the red inner-sleeve by grasping the square end of the inner-sleeve through the casing and gently pull it through while pushing down on the round end (the inner-sleeve may tear if forced).
- Do not forcefully or excessively bend or stretch either of CockBlock's parts.

POWDERING

- The red inner-sleeve is shipped pre-powdered as the thermoplastic elastomer material it is made from can become sticky.
- If it becomes sticky over time, simply clean and let dry, then powder with an adult toy powder or cornstarch.

STORAGE

- When not in use, store CockBlock in its box in a cool, dry place.
- For long term storage, separate CockBlock's two parts with a plastic bag or store separately.
- Do not let CockBlock come into prolonged contact with other adult toys, especially ones containing materials such as urethanes, rubbers, and lower grade silicones that could deform, discolour, or damage CockBlock.
- CockBlock may leave a residue if left on surfaces, and can permanently stain porous surfaces such as wood and paper.
- Do not let CockBlock come into contact with sharp items or abrasive surfaces that can damage its materials.
- At the end of its lifespan, CockBlock should be disposed of or recycled in accordance with your local regulations and directives.
